

Saving for College

Considerations and ways to save

There are many ways to save for a child's college education, each with advantages and disadvantages. To determine which approach may work best for you, consider several factors.

» **Time.** How much or little time you have until your child enters college can heavily influence your saving options.

» **Income taxes.** Some methods for saving are more advantageous when you are in a high tax bracket versus a low tax bracket. Some accounts have beneficial tax treatment when used for college expenses.

» **Account control.** Most approaches allow a parent to maintain control of the savings while a child is considered a minor. Upon reaching the age of majority (typically 18), a child may be legally allowed to control how college saving money can be used for certain types of accounts.

» **Investment options.** Within certain accounts, there may be a limited number of investment options. Other accounts may allow a wide variety of investment options. Some investments are very safe, while others may take on significant risk levels offering higher potential rates of return.

» **Contribution amounts.** Some accounts may have limits on how much can be saved, while others are unlimited.

» **Impact on financial aid.** Certain types of accounts may or may not receive more beneficial treatment when applying for financial aid for college expenses.
